### U.S. PUBLICATIONS

<u>NUMBER</u>	<u>FILING DATE</u>	<u>TITLE</u>
6,247,044 B1	May 18, 1999	APPARATUS AND METHOD FOR PROCESSING SERVLETS
5,69,546	May 31, 1994	SYSTEM FOR AUTOMATIC UNATTENDED ELECTRONIC INFORMATION TRANSPORT BETWEEN A SERVER AND A CLIENT BY A VENDOR PROVIDED TRANSPORT SOFTWARE WITH A MANIFEST LIST

### ABSTRACTS OF DISCLOSURE

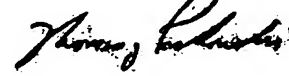

U.S. Patent No. 6,247,044 to Gosling et al. discloses a method and apparatus for operating a local server computer of a client-server network including a technique to receive a request from a client computer of the client-server network. A determination is made whether the request requires dynamically generated information from a servlet object of the client-server network. If so, a specified servlet object corresponding to the request may be uploaded from a remote server computer of the client-server network. The specified servlet object is then executed to obtain dynamically generated information corresponding to the request.

U.S. Patent No. 5,694,546 to Reisman discloses a novel electronic information transport component that can be incorporated in a wide range of electronic information products, for example magazine collections, to automate the mass distribution of updates, such as current issues, from a remote server to a wide user base having a diversity of computer stations. Extensions of the invention permit automated electronic catalog shopping with order placement and, optionally, order confirmation. A server-based update distribution service is also provided.

A separate listing of the above references on PTO Form 1449 is enclosed herewith for the convenience of the Examiner.

The Commissioner is also hereby authorized to charge any fees required in connection with this document to Deposit Account No. 16-1340.

Respectfully submitted,

Dated: March 19, 2008
